

Heliophyllite

©2001-2005 Mineral Data Publishing, version 1

Crystal Data: Orthorhombic, pseudotetragonal. *Point Group:* n.d. As acute pyramidal crystals, horizontally striated, also tabular, radiating. Intergrown with ecdemite; in coarsely foliated or granular aggregates, ball-like, massive.

Physical Properties: *Cleavage:* {011}, nearly perfect. *Hardness* = ~2 *VHN* = 96
D(meas.) = 6.89–7.14 *D*(calc.) = 7.33

Optical Properties: Translucent. *Color:* Yellow to greenish yellow. *Luster:* Vitreous on cleavages, greasy on fracture surfaces.

Optical Class: Biaxial (-); low birefringence. *Dispersion:* $r < v$, strong. $\alpha = \text{n.d.}$ $\beta = \text{n.d.}$
 $\gamma = \text{n.d.}$ $2V(\text{meas.}) = 35\text{--}40^\circ$

Cell Data: *Space Group:* n.d. $a = 10.794\text{--}10.823$ $b = 10.766\text{--}10.783$ $c = 25.560\text{--}25.580$
 $Z = 8$

X-ray Powder Pattern: Harstigen mine, Sweden. (ICDD 20-471).
2.84 (100), 2.70 (40), 3.66 (35), 2.06 (25), 1.647 (25b), 1.587 (25), 3.19 (20)

Chemistry:	(1)	(2)	(3)
As ₂ O ₃	10.85	12.28	12.01

P ₂ O ₅		0.039	
-O = Cl ₂	1.82	1.85	1.94
Total	98.82	99.45	100.00

(1) Harstigen mine, Sweden. (2) Xitieshan mine, China. (3) Pb₆As₂O₇Cl₄.

Occurrence: From metamorphosed Fe–Mn orebodies (Sweden); in the oxidation zone above a Pb–Zn deposit (Xitieshan mine, China); in metallic slag exposed to seawater (Laurium, Greece).

Association: Ecdemite, inesite (Sweden); mimetite, cerussite, calcite (Xitieshan mine, China).

Distribution: From the Harstigen mine, near Persberg; at Jakobsberg; and at Långban, Värmland, Sweden. From Laurium, Greece, in slag. At the Xitieshan Pb–Zn mine, Chaidamu, Qinghai Province, China.

Name: From the Greek for *sun* and *leaf*, in allusion to its color and habit.
